PROJECT DESCRIPTION:

The Agoura Hills, LLC proposes to discharge groundwater generated during construction dewatering activities at Oak Creek Development located near the intersection of Kanan Road and Canwood, Agoura Hills. A desilting tank will be installed to clarify the water before discharge.

VOLUME AND DESCRIPTION OF DISCHARGE:

Up to 1.008 mgd of groundwater will be discharged during construction dewatering at the site. The groundwater will be discharged to Medea Creek, (Latitude: 34° 08' 45", Longitude: 118° 45' 30"), thence to Malibu Creek, a water of the United States. The project location map is shown in Figure 1.

FREQUENCY OF DISCHARGE:

The groundwater discharge will be intermittent and is expected to last up to 18 months.

REUSE OF WATER:

The reuse of pumped groundwater at the site was evaluated. The pumped groundwater will be reused for dust control whenever possible. The disposal of water to a treatment facility is not feasible because it is not cost effective. Therefore, the majority of the groundwater will be discharged into Medea Creek.
